Malvern, Vic 3144

From Peter Fenton, Purchasing and Maintenance Manager

To say I was skeptical about De-Bug Units is a huge understatement – but I fitted them because my Manager - Doug Hislop instructed me to. Before fitting the De-Buggers the tug was not running at all well.

However since fitting the De-Buggers - the fuel problems have been fixed - filters last past normal change over time, engines run smoother, power is better, fuel burn is way down and smoke is reduced.

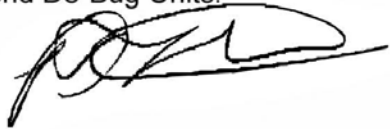

After a couple of years of this tug running 'so well' we fitted another six tugs with De-Bugs.

We've now been using De-Bug Units for 5 years now and I am convinced of how genuinely good they are. We have found, even if there wasn't any sign of diesel bug, the tugs are all running better, power is up a bit, fuel filter life is also better than normal, engines run smoother and fuel burn is good.

De-Buggers do this without any effort from us, they cost us nothing to operate, there's nothing to replace, they don't break and they don't waste our time.

I highly recommend De-Bug Units.

Sincerely

Peter Fenton
