Petene.

Attn Mr L.W.Forrest.

Dear Lindsay,

In response to your request for a letter of endorsement,

I have had my boat for five years and I've always had clogging fuel filters, excessive black smoke coupled with sluggish uneven running and power loss. Because the filters were always packed and filthy I was forced to change them after running through about 300 gallons of fuel.

I've had the injectors serviced, and I could never take the boat out without dosing the tanks first with about a litre of biocide before every trip. I even discarded the water trap and the pre filter because it was packed with this gluggy gelatinous substance.

I had made every effort to rectify this problem without success when you, Lindsay, suggested I try the De-Bug fuel decontaminator. When I fitted the DE-BUG new filters were also fitted.

From the first trip I noticed a better engine performance. For the first time in my memory the engines were pulling evenly. They were running cleaner and quieter. There is no smoke at all. Before I had thick black smoke. The engines are really sweet now, and the fuel is crystal clear. Numerous people have commented on my clear fuel. The De-Bug has been on my motors for a year now and I haven't had to change the filter once.

I also have figures to prove that I have greater fuel economy

I am confident that when I put out to sea now, that my fuel lines are clear, and that my family is safe. Thanks to DE-BUG.

Yours faithfully,

R. Piper,
