Dear Mr. Cuneo

We are please to inform you that since we installed one of your L-4000 De-Bug units here on Auger the results has been better than expected.

Our diesel fuel storage capacity on Auger is 226,000 gallons, we run 4 Solar Centaur "H" Turbines that uses 5 gallons of fuel each per minute when they are loaded. We installed the unit at a cost of _____ and since our filter usage cost has dropped from \$8,000.00 per year to less than \$1000.00 per year. We are satisfied with the appearance of the fuel and we have had no unscheduled engine shut downs due to clogged filters.

The De-Bug unit has performed as well as we were told it would, and at present looking to install similar units on the Day Tanks on the Emergency Generator and our backup Fire Water Pumps.

Sincerely Yours,

A handwritten signature in cursive script that reads "L. Rew".
