

D J Gorrie
24 Mountbatten Grove
UPPER HUTT

8 July 1988

"I was first introduced to De-Bug Fuel Treatment Units by bringing my vehicle into be serviced at Forrest Fuel Injection. Talking to Mr Lindsay Forrest, I told him about my vehicle not running properly, idling too low, and in general not being up to standard.

"Through this conversation I discussed with Lindsay the problem of having a fungus like growth in the water trap. Lindsay then introduced me to the De-Bug unit, recommending it to slow down and eventually eliminate the bug completely from my engine.

With the De-Bug fitted to my vehicle I noticed a dramatic difference, the vehicle was idling much smoother, and after running it through it's paces the engine was pulling a lot more effectively.

Since then I have had my vehicle serviced three or four times and noticed that the microbial infestation had not re-germinated.

The fungus like growth used to be in the water trap, not a trace of it in the f filters. The water trap stopped the 'bug' from going into the filters, which was lucky, and since the installation of the De-Bug unit it has been perfect with no troubles."

A handwritten signature in cursive script, appearing to read 'D Gorrie', is written on a vertical line.
